

DRAWINGS

Replacement drawing sheets are enclosed in response to the Examiner's objection.

REMARKS

Applicants request withdrawal of the objection to the declaration. A declaration under 37 CFR 1.63 must "identify" the country of citizenship of each inventor. The Examiner evidently perceives Germany to be the country of citizenship, and does so on the basis of the declaration as filed. Accordingly, Applicants respectfully submit that the Office Action fails to make a *prima facia* case to prove that the word "German" does not identify Germany as the country of citizenship.

Claims 1-27 are cancelled.

New claims 28-30 are submitted to distinguish the invention from the disclosure of Morrn. As defined in new independent claim 28, the rocker lever has first and second rollers at its opposite ends, and has a body area with a pivot between the opposite ends. The positioning rail engages the rocker lever at the body area beside the pivot. The spring biases the second roller, which is located at the second end of the rocker lever, into driven rolling contact with the cam shaft. The Morrn patent does not disclose or teach these specific structural limitations of the claimed invention. The limitations of new dependent claims 29 and 30 distinguish the invention further from the disclosure and teaching of Morrn. Therefore, new claims 28-30 are not anticipated or made obvious by Morrn.

Applicants respectfully request allowance of claims 28-30.

Respectfully submitted,
